

About

EDIWIN XML/EDI SERVER is the Edicom solution with which you can versatily manage all of your commercial transactions and documents from your ERP.

EDIWIN XML/EDI SERVER automates the process of importing and exporting records in the proprietary language of your company's management system using sophisticated multi-format data mapping and conversion systems which automate the generation, dispatch, receipt, and integration of important business documents in standardized formats (EDIFACT, X12, XML, Facturae, etc.).

The screenshot displays the ediwin XML/EDI Server interface. On the left is a navigation tree with categories like 'Received Documents', 'Sent Documents', and 'Deleted Documents'. The main area shows a 'Processed' document list with the following data:

Signature	Source	Destination	Doc. Number	Date	Situation Change Date	Document Type
	MR - COMPANY A	MS - COMPANY	12345680	02/12/2009	02/12/2009	EDI_DELFOR:D_96A_UN_A09040
	MR - COMPANY A	MS - COMPANY	12345677	02/12/2009	02/12/2009	EDI_DELFOR:D_96A_UN_A09040

Features

- **Multi-protocol:** Supports multiple standards for sending and receiving data (EDIFACT, XML, X12, XBRL, ODETTE, VDA, etc.).
- **Fully integratable:** Ready to be integrated with most ERPs (SAP, Oracle, Baan, Navision, JD Edwards, Axapta, etc.).
- **Multi-platform:** A multi-protocol solution that can be integrated with multiple networks (FTP, HTTPS, WEB SERVICES, AS2, etc.).
- **Authorized for electronic invoicing:** Designed for use with electronic invoicing system in the European Union. Also suitable for use with invoicing systems outside the EC, especially Latin American countries.
- **Multi-sector:** Ready to work in any sector (retail, healthcare, automotive, finance, tourism, etc.).

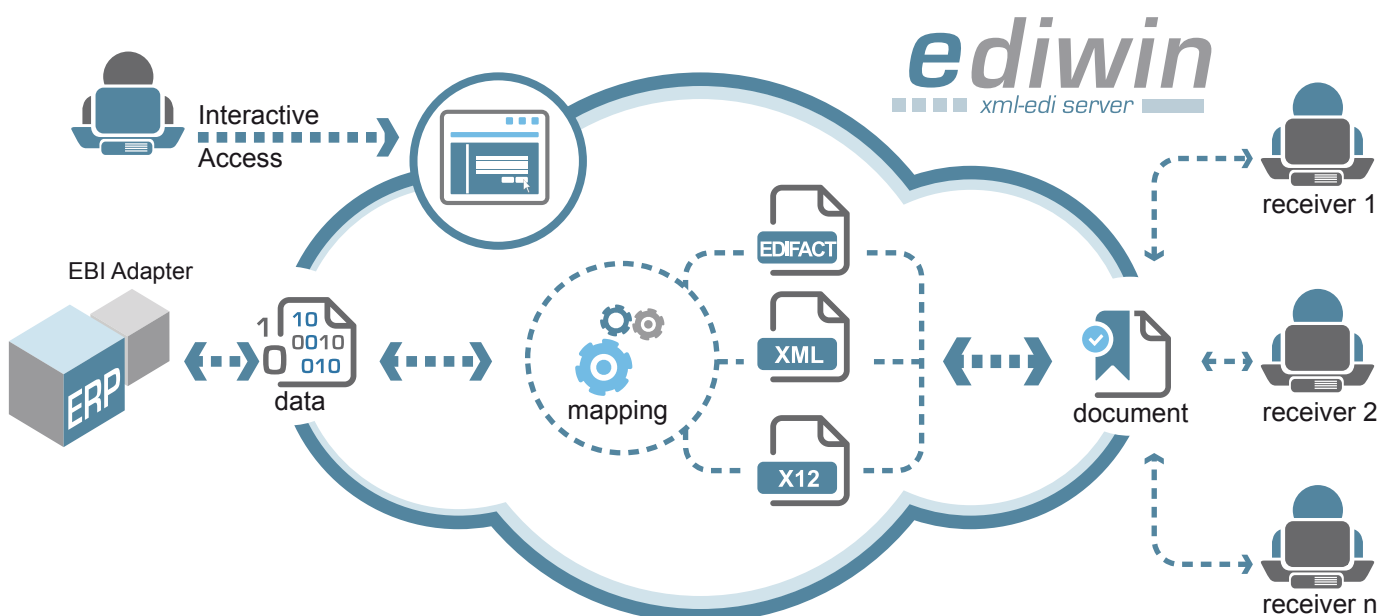

How it works ✓

The EDIWIN XML/EDI SERVER software is hosted on the EDICOM B2B Cloud Platform and can be accessed simply by using an internet browser, allowing you to monitor and control all aspects of your digital transactions. An adaptor developed by Edicom keeps your EDIWIN XML/EDI SERVER in permanent communication with your ERP.

When you wish to send a document (order, invoice, shipping notice, financial report, etc.), it is generated from your ERP. The Edicom adaptor detects the availability of documents to send and automatically transfers the data via Web Services to EDIWIN.

This then identifies the recipient and communicates with the other EDICOM B2B Cloud Platform applications to convert the data to the structured data standard used by the recipient, and sends the information using the protocol required in each case.

For messages received, the process is reversed. When a document is received by the EDICOM B2B Cloud Platform, EDIWIN conducts a series of validations and manages the document conversion processes to change the data to your ERP proprietary language. The transaction data are stored on your local network and automatically integrated with your company's internal management system.

Ediwin XML/EDI Server

Integrated B2B communications solution

Benefits ✓

- **Able to process large amounts of data:** The application is designed to handle moderate- and large-volume transactions and can administer large quantities of data in real time.
- **Adapted to operate in multinational environments:** EDIWIN XML/EDI SERVER is an application designed to manage corporate electronic data-interchange projects. It allows users to integrate with all of their trading partners regardless of where they are or where transactions are sent.
- **A single B2B communications platform:** EDIWIN XML/EDI SERVER has the capability of processing all types of electronic documents, enabling its use as a single application to manage multiple projects of electronic document interchange (EDI, electronic invoicing, XBRL, certified storage, etc.).
- **Edicom support with 24/7 availability:** Contracting EDIWIN XML/EDI SERVER to implement B2B communications ensures full access to our Customer Care Centre for the resolution of concerns and incidents. Our Customer Care Centre is able to serve you in several languages 24 hours a day, 7 days a week.

Current version ✓

Version 6.0, which updates version 5.0.

EDIWIN XML/EDI Server 6.0 has already been put into service on Edicom's technology infrastructure. The new version is more robust and provides new functions:

- **Software developed entirely in JAVA** to support different operating systems such as LINUX/WINDOWS with 100% stability.
- **Greatly increased performance and productivity** for large-volume transactions.
- **Improved stability and robustness** thanks to an environment with an architecture which administers 100% of messages in a database.
- **Streamlined and improved integration** and mapping processes with users' ERPs.
- **Updated electronic invoicing** processes which incorporate new international signature systems.
- **More data input forms to choose from with greater flexibility.**
- **More ways to customize** your online user environment.
