Enterprise Application Integrator (EAI)

About ✔

INTEGRATING APPLICATIONS IMPROVES BUSINESS PRODUCTIVITY.

Large- and medium-sized enterprises have complex technology platforms comprising different computer systems which handle the generation, processing, and connectivity of data needed for a business to function commercially, logistically, and financially.

Integrating all of the different applications that a company uses to operate into a single system pools technological resources and frees up human potential, providing very significant added competitive advantages:
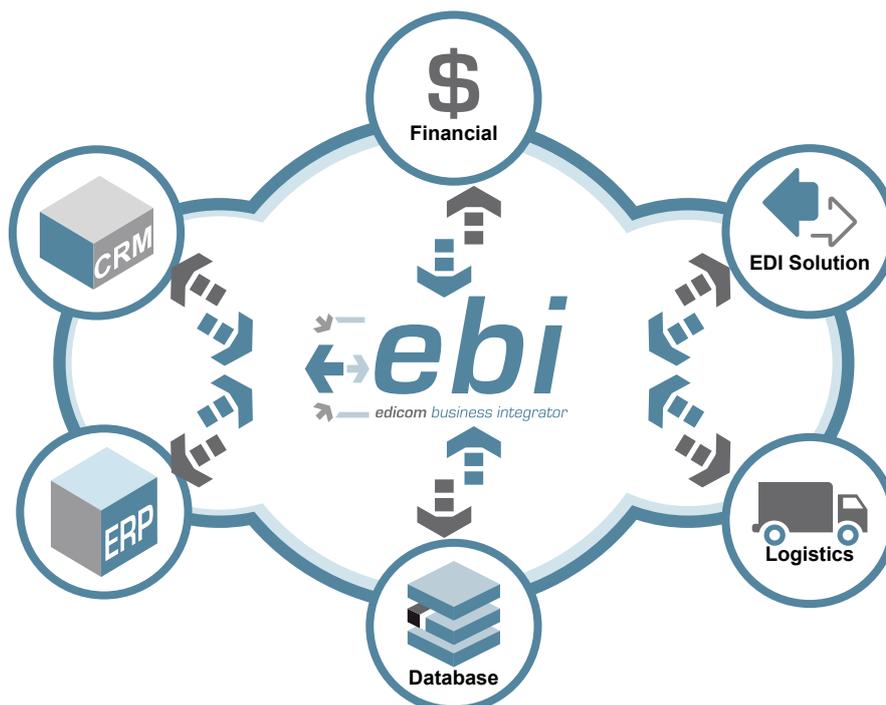

- **Simplifies and automates data transmission between applications to reduce costs and errors.**
- **Shares critical information between different corporate applications and departments.**
- **Improves flexibility and administrative capacity.**

ENTERPRISE APPLICATION PROVIDER

EBI, EDICOM Business Integrator, is a tool used to integrate a company's applications (i.e. an Enterprise Application Provider).

It enables computer applications which use different programming formats (XML, TXT, EDIFACT) to connect to each other and share data.

Integration processes can involve the systems in a single company or those of several organizations, so information can be shared with all your business partners on matters such as the supply chain or collaboration on the design of a product, for example.

Enterprise Application Integrator (EAI)

How it works ✔

EBI - the tool that connects applications which work with different formats.

Edicom Business Integrator, or EBI, automates the process of data integration between different computer systems without them having to be in the same physical environment or network.

It implements a bus or channel to identify the various applications to integrate, which will act as information "publishers" and/or "subscribers". Publisher applications can then publish information in EBI by extracting data structures to subscribers, so whenever new data is entered into the EBI system from any publisher application, it will be taken by the rest of the other subscriber programs, enabling the integration of all of the data managed by the different computer systems.

EBI is integrated with the EDICOM B2B Cloud Platform and administered by our in-house technicians, who oversee the integration of our clients' business processes with those of their trading partners. To do this, we configure environments adapted to the requirements of each client, in which we identify the source and destination applications to interchange by exchanging information hosted on separate computer systems.

Edicom Business Integrator
Enterprise Application Integrator (EAI)

Benefits ✔

- **Remote integration:** Designed for the integration of systems in B2B environments. Allows information to be shared between remote systems, simplifying the exchange of information between business partners and users.

- **Integrated with EDICOM solutions:** When a client signs up for any of EDICOM's e-commerce solutions which integrate the client's internal systems (EDI, electronic invoicing, CRP/VMI, etc.) EBI manages the integration of the applications in question. This allows EDICOM to employ the most powerful EAI system available to serve clients which contract integrated EDICOM solutions.

- **Transparent to users:** EBI enables a high-performance environment to manage integration processes between EDICOM B2B Cloud Platform applications and a user's ERP. This technologically advanced environment is transparent to the client and is operated and administered by qualified Edicom personnel who parameterize the entire system, enabling the data conversion, rules, and communications systems required to integrate EDICOM applications with a client's in-house systems.

- **A customized tool:** EBI is a tool which adapts to the information transmission needs of our clients' business models, using the system configuration to convert and integrate data from the different applications which need to connect.

About EDICOM

Edicom is a global leader in the development of technological platforms for B2B e-commerce solutions like EDI (Electronic Data Interchange) or Electronic Invoicing.

With a long history in the field of EDI, we currently have over 9000 clients worldwide, many of them leaders in their respective industries such as Unilever, Procter & Gamble, El Corte Inglés, Toys R'Us, etc.

Over 100 million commercial transactions are generated worldwide through Edicom's solutions in ASP – SaaS mode, throughout multiple sectors such as Retail, Healthcare, Logistics and Transportation, Automotive, Tourism, Finance, etc.

Edicom provides advanced technological solutions that enable users to outsource the administration and maintenance of large B2B communications platforms, achieving seamless operation of all systems.

SOLUTIONS

- Application Service Provider
- EDI - Electronic Data Interchange
- Electronic Invoice
- Accounts Payable Integration
- EdicomData - GDSN Data Pool
- Continuous Replenishment CRP/VMI
- EDICOMNet - Private B2B communications network

CERTIFICATION AUTHORITY

- Issuing Electronic Certificates
- Remote Signature Services from Secure Device
- Timestamping
- Certified document safekeeping service

SERVICES

- International Support Center
- 24x7 System Monitoring
- Mapping Management
- Global Outsourcing
- Onboarding Projects
- Integral Partner Management
